

Poker Night

Complete User Flow & Experience Specification

Admin • Registered Group Member • New Guest

DOCUMENT PURPOSE

This document defines the complete tournament journey from group creation to final results. It explains what each user sees, what each user can do, what the system must calculate, and how the three roles interact. It is written for product, design, development and QA teams.

Version 1.0 | 6 August 2026

- Appendix A. Sample Event
- Appendix B. Glossary

1. Purpose and Product Model

Poker Night is not an online poker game. It does not deal cards, determine hand winners, track pots or show a graphical poker table. It manages the real-world event around a physical Texas Hold'em game: invitations, attendance, chip preparation, tournament structure, timer, rebuys, add-ons, seating, prize calculations, communication and results.

THE CENTRAL PRODUCT IDEA

The group is the permanent home. The event is one specific poker night. The live tournament is the operational mode used once play begins.

1.1 The Group

A group is a private, persistent community of regular players. It contains the group chat, polls, upcoming events, completed-event history, reusable tournament presets and saved chip sets. A person may belong to more than one group.

- Group name, image and optional description
- Registered members
- Private group chat
- Polls
- Upcoming and completed events
- Saved tournament presets
- Saved chip sets

1.2 The Event

An event is one scheduled poker night created inside a group. It is visible only to that group's registered members, plus invited guests who have the event link, QR code or event code. The event contains the invitation, RSVP list, guest slots, check-in, tournament preparation, live state and final results.

1.3 The Live Tournament

The live tournament begins only after the admin confirms actual attendance and generates the final structure. During play, the system synchronises the timer and permitted information across the admin, player, guest and TV views. The app manages the event but remains unaware of cards, pots, physical dealer rotation and individual player stack sizes.

1.4 Recommended Product Navigation

Area	Purpose
Home	Upcoming event, active tournament, recent group activity and next required action.
Chat	Permanent group chat for registered members.

Area	Purpose
Events	Upcoming and completed poker nights.
Polls	Group decisions such as date, time, buy-in or location.
History	Completed events and basic non-financial statistics.
Settings	Group defaults, saved chip sets and tournament presets.

2. Roles, Terminology and Permissions

2.1 Role Names

Role	Definition
Admin	The person who creates the group or event and operates the tournament. One admin controls each tournament in the MVP.
Registered Group Member	A signed-in user who belongs to the group, can use chat and polls, can RSVP and can follow the live tournament.
New Guest	A person without an account who is invited as someone's +1, +2, +3 or +4. The guest receives limited event-only web access.

TERMINOLOGY CORRECTION

A signed-in person who is part of the group chat should not be called a guest. In the product and design, call this person a Registered Group Member. "Guest" should mean an unregistered event-only participant.

2.2 High-Level Permission Matrix

Capability	Admin	Registered Member	New Guest
Create group	Yes	No	No
Create/publish event	Yes	No	No
See private group chat	Yes	Yes	No
Create/respond to polls	Yes	Yes	No
RSVP to event	Admin may attend	Yes	No direct RSVP
Invite guest slots	Yes	Yes through Going +N	No
Claim guest slot	Manual correction	No	Yes
Check in	Can check anyone in	Self check-in	Self check-in request
See live timer/blinds	Yes	Yes	Yes
Record elimination/rebuy/add-on	Yes	No	No
See private financial calculation	Yes	No	No
See chat during event	Yes	Yes	No
See final paid positions	Yes	Yes	Yes
See final payout amounts	Yes	No	No

2.3 Role Projection Rule

Permissions must be enforced by the backend, not by hiding buttons in the interface. The same tournament record may contain private financial information, but the API response for a player or guest must omit that information completely. A visual “Host View” toggle is not a security boundary.

3. Event Lifecycle and Shared Rules

Status	Meaning
Draft	Visible only to the admin. Event may be edited or deleted.
Published	Visible to group members. Event card is posted and pinned in the group chat.
RSVP Open	Members choose Going, Going +1/+2/+3/+4, Maybe or Can't Come.
Check-in Open	Registered members and guests may request check-in. Admin confirms attendance and seats.
Ready	Final attendance and chip inventory are confirmed. Final tournament structure is generated.
Live	Timer and tournament operations are active.
Rebuy + Add-on Break	Clock paused. Rebuys and late registration close. Admin records final rebuys/add-ons and confirms the final Prize Pool.
Final Table	If the game used multiple tables, all nine remaining players are randomly redrawn.
Finished	Results are confirmed and stored in group history.

3.1 RSVP Rules

- Each registered group member has exactly one active response.
- Available responses: Going, Going +1, Going +2, Going +3, Going +4, Maybe and Can't Come.
- Going +2 means one registered member plus two guest slots, for three expected participants in total.
- Responses may be changed until one hour before the scheduled start time.
- The admin may correct or reopen an RSVP when necessary.
- “Maybe” does not reserve a seat and is not included in the confirmed player count.

3.2 Check-in Rules

- A registered member can request self check-in or be checked in by the admin.
- A guest can request check-in only after claiming a valid guest slot.
- No player receives a table and seat until check-in is confirmed.
- The admin may check in a player or guest manually.
- Late registration closes permanently at the end of the selected rebuy level, normally Level 6.

3.3 Tournament Structure Rules

- The final structure is generated from actual attendance, selected duration and the physical chip set.
- Level durations may only be 10, 15 or 20 minutes.
- The starting stack and opening blinds are calculated together; there is no universal fixed starting stack.
- Blind values must be practical with the chips in play. The small blind does not have to equal exactly half the big blind.
- Existing levels are never removed during play. Future levels may be changed or an intermediate future level may be inserted only after admin confirmation.
- The app does not track individual chip stacks. Average stack is derived from total chips in play divided by active players.

3.4 Financial Visibility Rules

- Before the rebuy/add-on break is settled, members and guests see “Estimated Prize Pool”.
- After settlement, members and guests see “Prize Pool”.
- Players and guests never see individual payout amounts, organizer percentage, organizer amount, rebuy totals or add-on totals.
- After the tournament, all paid positions are visible, without money amounts.
- The admin privately sees the complete calculation and payout amounts.
- Currency symbols are hidden in the primary interface. Display “15” or “15 + 5”, not “€15”.

4. Admin End-to-End User Flow

4.1 Admin Entry and Home

After signing in, the admin lands on Home. The page should not be a generic dashboard full of data; it should identify the next required action.

- Active tournament, if one exists
- Next upcoming event
- Pending guest or player check-ins
- Confirmed attendance
- Latest group message and latest poll
- Primary actions: Create Event and Start Cash Game

4.2 Create or Open a Group

- Select Create Group.
- Enter group name, optional image and optional description.
- System creates a private group invitation link, group code and QR code.
- Admin shares the invitation with regular players.
- Registered players join and gain access to Chat, Events, Polls and History.

4.3 Create a Tournament Event

The admin taps “Create Event”. Creation should be a short guided wizard rather than one long settings page.

Step 1 — Event Details

Field	Behaviour
Tournament name	Required. Example: Friday Poker Night.
Date	Required.
Start time	Required.
Location	Optional. May be text, address or private note visible only to confirmed participants.
Buy-in	Required numeric value, displayed without currency symbol.
Target duration	Required. Default 3.5 hours; options 3, 3.5, 4, 4.5, 5, 5.5 and 6 hours.

Step 2 — Tournament Options

Option	Rule
Rebuys	On by default. Only after elimination. Unlimited by default.
Rebuy closes	End of selected level; default end of Level 6.
Rebuy cost	Defaults to original buy-in.
Add-on	Admin selects yes/no and price. Maximum one per active player.
KO bounty	No bounty or bounty amount. Bounty money is separate from the normal Prize Pool.
Ante preference	Let Poker Night recommend, No ante, Big blind ante or Individual ante.
Equipment, drinks & snacks	Private organizer percentage; never shown to players and never called rake.

Step 3 — Event Preview and Publish

Before publishing, the admin previews the exact card that group members will see. The card should be concise, friendly and readable in the chat feed.

SAMPLE GROUP EVENT CARD

- ♠ Friday Poker Night
- 📅 Friday, 14 August
- 🕒 20:00
- 📍 Campo Grande
- 💰 Buy-in: 15
- 🔄 Rebuys until end of Level 6
- ⛶ Add-on available
- 🎯 KO Bounty: 5

□ Target duration: 3h 30m

When the admin taps Publish Event, the system must:

- Add the event to the group Events tab.
- Post and pin the event card in the group chat.
- Notify group members.
- Open RSVP responses.

4.4 Monitor RSVPs

The admin sees a live attendance summary separated into confirmed members, guest slots, Maybe, Can't Come and No Response. The interface must show both people and seats; one Going +2 response represents three expected players.

Category	Meaning
Confirmed members	Registered members who selected Going or Going +N.
Confirmed guest slots	All guest slots created by Going +1 through Going +4.
Maybe	Not counted in the confirmed player total.
Can't Come	Visible but excluded from preparation.
No response	Members who have not yet answered.
Expected attendance	Confirmed registered members plus confirmed guest slots.

4.5 Configure the Physical Chip Set

Chip configuration may be prepared before the event or shortly before check-in closes. The admin chooses one of three paths.

Option A — Saved Chip Set

Select a reusable chip set already stored in the group, including colours, values and optional exact quantities.

Option B — Exact Inventory

- Select or create each chip colour.
- Indicate whether the chip is printed or unnumbered.
- Enter a unique value.
- Enter exact quantity available.
- System guarantees that the proposed starting stacks, rebuy reserve and add-on reserve fit the inventory.

Option C — Quick Automatic Setup

- Select available colours.
- Indicate numbered or unnumbered chips.
- Enter printed values where applicable.
- Drag colours from most available to least available.
- For unnumbered chips, Poker Night proposes unique values; two colours may never share a value.
- System shows required quantities and asks the admin to confirm that enough chips exist.

4.6 Event-Day Preparation

On the day of the tournament, Home and the event page should present a preparation checklist. The admin should never have to remember the correct sequence.

- Review event information and any recent changes.
- Open check-in.
- Confirm chip set and inventory.
- Review expected late arrivals.
- Prepare starting stacks.
- Reserve rebuy and add-on chips.
- Open TV Mode if required.
- Test voice announcements.

4.7 Check-in Management

- Admin taps Open Check-in.
- Registered members and guests see the Check In action.
- Requests appear in the admin queue.
- Admin confirms each request, or checks a person in manually.
- The system assigns a table and seat only after confirmation.
- The admin can view confirmed-but-absent people, pending guests, Maybe arrivals and expected late arrivals.

4.8 Generate the Final Tournament Structure

The event may have a provisional recommendation earlier, but the final structure is generated only when the admin confirms actual attendance and final chip availability.

Input	Use
Checked-in players	Primary player count used for the final calculation.
Expected late arrivals	May be included if the admin confirms they will arrive before late registration closes.
Target duration	Selected event duration.
Physical chip set	Colours, values and availability.
Rebuys and add-ons	Expected additional chips and timing.
Ante preference	Recommended or admin-selected format.

The generated result must include:

- Starting stack and opening blinds
- Starting depth in big blinds
- Full blind progression
- Level duration of 10, 15 or 20 minutes
- Starting-stack chip recipe
- Rebuy stack recipe, which may use larger denominations later while preserving the same total value
- Estimated add-on recommendation
- Ante type and activation level
- Number of tables and random seat assignment

- Initial dealer position
- Estimated finishing window
- Inventory warnings and colour-up instructions

RECOMMENDED STRUCTURE EXAMPLE

10 players • 3h 30m target
 Starting stack: 10,000
 Opening blinds: 50 / 100
 Starting depth: 100 BB
 Level duration: 15 minutes
 Rebuys close: end of Level 6
 Big blind ante: begins Level 7
 Expected finish: 23:25–23:50

4.9 Start the Tournament

- Admin reviews and confirms the generated structure.
- Players receive table and seat assignments.
- TV Mode becomes available through its read-only URL/code.
- The initial dealer position is displayed and may be announced.
- Admin taps Start Tournament.
- The timer begins and all connected views synchronise.

4.10 Admin Live Screen

The live admin screen must prioritise speed and error prevention. The most-used controls remain visible; uncommon or dangerous actions are secondary.

Always visible	Secondary menu	Destructive / confirmation required
Large timer	Adjust time	Restart current level
Current blinds and ante	Make announcement	Finish tournament
Next blinds	Edit future structure	Cancel tournament
Players remaining	Rebuy/add-on management	
Average stack	TV Mode	
Prize Pool status	Undo recent action	
Pause/resume	Seat management	
Next level		

4.11 Player Actions During Play

The admin opens Players, selects one person and sees only actions valid for that person and tournament phase.

- View or change seat
- Eliminate player
- Eliminate and rebuy, if the rebuy period is open
- Undo elimination

- Record one add-on during the settlement break
- Mark final position

4.12 Elimination and Rebuy Flow

- Admin selects a player and taps Eliminate.
- Before the rebuy deadline, the system asks: Leave Tournament or Rebuy?
- If Rebuy is selected, the player normally remains in the same seat.
- The player receives a rebuy stack with the same total value as the original starting stack.
- The physical rebuy stack may use larger denominations that are practical for the current level.
- After the deadline, the player is permanently eliminated and their finishing position is stored.
- Every elimination and rebuy action can be undone.

4.13 End-of-Rebuy and Add-on Break

This is a dedicated operational flow, not an ordinary timed break. The app guides the admin through each required task.

- The selected rebuy level ends, normally Level 6.
- The timer pauses automatically.
- Rebuys and late registration close permanently.
- No new player can be added.
- Admin records any final valid rebuy from a hand that began before the deadline.
- Poker Night calculates the recommended add-on stack from average stack, big blind, remaining players, total chips and target finish.
- Admin selects each active player who purchases the one permitted add-on.
- Poker Night displays chip-exchange and colour-up instructions.
- Admin confirms ante activation or keeps antes off.
- The final Prize Pool and private payouts are recalculated.
- Admin confirms settlement complete and manually starts the next level.

4.14 Live Structure Adjustments

The system may recommend changes when actual pace differs materially from the target, but it never changes the tournament automatically.

- Future levels may change from 20 to 15 minutes, 15 to 10 minutes, 10 to 15 minutes or 15 to 20 minutes.
- An intermediate future blind level may be inserted.
- Future blind growth may be softened or accelerated.
- Ante activation may be moved earlier or later.
- Existing or completed levels are never removed.
- The admin sees old structure, proposed structure, current predicted finish and proposed predicted finish before confirmation.

4.15 Table Balancing

The interface uses clear lists, not a graphical poker table. When tables become unbalanced, the system proposes a move and waits for admin confirmation.

EXAMPLE MOVE

Move Sarah from Table 2, Seat 4 to Table 1, Seat 7.

Actions: Confirm Move • Choose Another Move • Move Manually

4.16 Final Table

If the tournament began with multiple tables, the final-table redraw occurs when nine players remain.

- Timer pauses.
- Poker Night randomises all nine seats and the initial dealer position.
- Admin reviews the seat list.
- Players receive the updated assignments.
- Admin confirms everyone is seated.
- Play resumes. The app does not track dealer rotation afterwards.

4.17 Finish Tournament

- Admin confirms the winner and all final positions.
- System validates that every paid position has one player.
- Admin reviews the private payout calculation and any agreed deal.
- Players and guests receive the final paid-position list without amounts.
- Event moves to Finished and is stored in group History.
- Basic group statistics update.

5. Registered Group Member User Flow

5.1 Join the Group

- Open group invitation link, group QR code or group code.
- Create an account or sign in.
- Join the private group.
- Gain access to Chat, Events, Polls, History and notifications.

5.2 Discover the Event

The member may discover the event through the pinned group-chat card, the Events tab or a notification. All important rules are visible before RSVP.

- Tournament name, date and start time
- Optional location

- Buy-in
- Rebuy closing level and cost
- Add-on availability and price
- KO bounty status and amount
- Target duration
- Host/admin
- RSVP deadline

5.3 RSVP

- Member selects one response: Going, Going +1/+2/+3/+4, Maybe or Can't Come.
- Going +N automatically creates N named but unclaimed guest slots.
- Member can share the event link, QR code or code with the invited guests.
- The response may be changed until one hour before the start time.

5.4 Pre-Event Experience

- Receive event updates and RSVP reminders.
- Use group chat and polls.
- See whether check-in is open.
- Review location, start time and tournament rules.
- See whether invited guest slots have been claimed.

5.5 Check In

- Member arrives and opens the event.
- Taps Check In.
- The request enters the admin queue.
- After admin confirmation, the member receives table and seat.
- The main button changes to View My Seat, then Open Live Tournament.

5.6 Live Registered Member View

Visible	Not visible / not permitted
Large timer	Admin controls
Current blinds and ante	Organizer percentage or amount
Next blinds	Rebuy/add-on totals
Players remaining	Individual payout amounts
Average stack	Individual chip stacks
Table and seat	Other players' private actions
Estimated Prize Pool, then Prize Pool	Self-recording elimination/rebuy/add-on
Announcements	
Chat and polls	

5.7 After Elimination

An eliminated registered member remains part of the event experience. They may continue to follow the timer, players remaining, Prize Pool, announcements, chat and polls. The interface must clearly mark them as eliminated without hiding the event.

5.8 After the Tournament

- See the winner and every paid finishing position.
- Do not see payout amounts.
- See the completed event in group History.
- See basic group-level non-financial statistics.

6. Complete New Guest User Flow

6.1 Receive Event Access

The new guest receives a shared event link, QR code or event code from a registered member who selected Going +1, Going +2, Going +3 or Going +4. No account is required.

6.2 Open Guest Landing Page

The guest sees a friendly, event-specific landing page rather than a full application dashboard.

SAMPLE GUEST LANDING

You've been invited to Friday Poker Night ♠
 Friday, 14 August • 20:00
 Campo Grande
 Buy-in: 15 • Rebuys until Level 6 • KO 5
 Primary action: Claim My Guest Place

6.3 Identify Inviter and Claim Slot

- Guest selects "Who invited you?"
- System displays only registered members who currently have unclaimed guest slots.
- Guest selects one available slot, for example Alex's Guest 2.
- Guest enters their name and confirms.
- The slot becomes reserved and cannot be claimed twice.
- Admin may correct or remove the reservation.

6.4 Before Arrival

The same event link remembers or securely resolves the claimed slot. The guest can see event details, inviter, guest name, current check-in status and the Check In button when check-in opens.

- No access to group chat
- No access to polls
- No access to group History or member profiles
- Optional prompt to create an account and join the group

6.5 Guest Check-in

- Guest arrives and taps Check In.
- Admin receives the request.
- Admin confirms the guest.
- Guest receives table and seat.
- Main button changes to Open Live Tournament.

6.6 Limited Guest Live View

Guest sees	Guest does not see
Timer	Group chat
Current blinds and ante	Polls
Next blinds	Group History
Players remaining	Admin controls
Average stack	Organizer information
Own table and seat	Rebuy/add-on totals
Announcements	Payout amounts
Estimated Prize Pool, then Prize Pool	Individual chip stacks

6.7 After the Tournament

- See the winner and all paid positions without money amounts.
- Optionally create an account.
- Optionally request to join the group.
- After admin approval, the guest result may be linked to the new account.

7. Shared Tournament Flows

7.1 Invitation and Guest-Slot Logic

- Only a Going +N response creates guest slots.
- Each guest slot has a stable identifier, inviter, position number, status and optional guest name.
- Statuses: Unclaimed, Reserved, Check-in Requested, Checked In, Cancelled.
- An inviter changing Going +2 to Going +1 must not silently remove a checked-in guest. The admin must resolve the conflict.
- Duplicate slot claims are blocked server-side.
- A guest may switch to another free slot only before check-in or with admin approval.

7.2 Contextual Main Button

Each event page should present one dominant next action. This is the simplest way to make the application feel intelligent and reduce navigation errors.

Role	State	Primary button
Admin	Draft	Edit Event
Admin	Published	Review RSVPs

Role	State	Primary button
Admin	Check-in available	Open Check-in
Admin	Attendance confirmed	Generate Final Structure
Admin	Ready	Start Tournament
Admin	Live	Manage Tournament
Admin	Rebuy break	Complete Rebuy & Add-on Break
Admin	Finished	View Results
Registered Member	No RSVP	Respond to Invitation
Registered Member	RSVP submitted	Update RSVP
Registered Member	Check-in open	Check In
Registered Member	Check-in pending	Waiting for Confirmation
Registered Member	Checked in	View My Seat
Registered Member	Live	Open Live Tournament
Registered Member	Finished	View Results
New Guest	Unclaimed	Claim My Guest Place
New Guest	Slot reserved	View Invitation
New Guest	Check-in open	Check In
New Guest	Check-in pending	Waiting for Confirmation
New Guest	Checked in	View My Seat
New Guest	Live	Open Live Tournament
New Guest	Finished	View Results

7.3 TV Mode

TV Mode is a separate read-only route opened through a TV code, QR code or direct URL. It contains no controls and no private payout data.

- Tournament name
- Very large timer
- Current blinds and ante
- Next level
- Players remaining
- Average stack
- Estimated Prize Pool or Prize Pool
- Current visual announcement
- No payout amounts, organizer information, chat or admin controls

7.4 Voice Announcements

Voice announcements are English-only in the initial release. The admin manually selects one Audio Master device; other devices remain silent.

- Tournament starting
- New level and blinds
- Five minutes remaining
- One minute remaining

- Rebuys closed
- Final table
- Winner
- Initial dealer name when generated

7.5 Chat and Polls

Chat and polls belong to the permanent group, not the unregistered guest experience. An event may automatically create a pinned event card in chat and may link to a related poll. Registered members remain in chat after elimination.

8. Screen and Navigation Specification

Admin screen	Purpose
Home	Next action, active/upcoming event, pending check-ins, recent chat/poll.
Group Chat	Messages, pinned event cards and event links.
Events	Upcoming, live and completed events.
Create Event Wizard	Event details, options, preview and publish.
RSVP Dashboard	Members, guest slots, Maybe, Can't Come and No Response.
Chip Set	Saved, exact inventory and quick automatic modes.
Check-in Queue	Pending requests, checked-in people and absences.
Final Structure Review	Stacks, blinds, levels, chips, tables and expected finish.
Live Tournament	Timer and primary admin controls.
Players	Check-in, seating, elimination, rebuy, add-on and undo.
Structure	Upcoming levels and approved future edits.
Rebuy/Add-on Break	Guided settlement workflow.
Prize Calculation	Private collected amount, organizer amount, Prize Pool and payouts.
Final Table Redraw	Randomised nine-player seat list and dealer position.
Results	Final positions and private payout confirmation.
History	Completed events and basic statistics.

8.1 Registered Member Screens

Member screen	Purpose
Group Home	Chat, events, polls and history.
Event Details	Rules, RSVP and updates.
RSVP	Single response selection including Going +N.
Guest Slots	Status of slots created by the member.

Member screen	Purpose
Check-in	Request, pending and confirmed states.
Seat	Table and seat assignment.
Live Tournament	Timer, blinds, average stack, Prize Pool, chat and polls.
Results	Paid positions without money.

8.2 New Guest Screens

Guest screen	Purpose
Code / Link / QR Entry	Resolve a valid event invitation.
Guest Landing	Basic event information and Claim My Guest Place.
Choose Inviter	Only people with free guest slots.
Choose Slot	Available Guest 1/2/3/4 positions.
Guest Details	Name entry and reservation confirmation.
Check-in	Request, pending and confirmed states.
Seat	Table and seat.
Limited Live View	Timer, blinds, average stack, Prize Pool and announcements.
Results	Paid positions without money.
Create Account	Optional conversion to registered member.

8.3 Required System States

- Loading and skeleton states
- Empty group, no events and no messages
- No RSVP yet
- Invalid, expired or revoked code
- Guest slot already taken
- Check-in closed
- Waiting for admin confirmation
- Offline admin mode
- Disconnected player/guest/TV view
- Reconnected and synchronised
- Tournament paused
- Tournament cancelled or rescheduled
- Action failed and safe retry

9. Contextual Main Button Logic

The main button must be calculated from role, event state, RSVP state and check-in state. It must never offer an action that is unavailable or irrelevant. Secondary navigation remains available, but the primary button should always answer “What should I do next?”

DESIGN RULE

One event, one dominant next action. The app should not make users choose among several equally prominent buttons.

9.1 Priority Rules

- Blocking states take priority: invalid invitation, event cancelled, check-in closed or action awaiting admin approval.
- Before RSVP, the member sees Respond to Invitation.
- After RSVP but before check-in, the member sees Update RSVP or View Event.
- When check-in opens, Check In overrides ordinary event actions.
- After check-in, View My Seat is shown until the tournament becomes live.
- During play, Open Live Tournament is shown.
- After finish, View Results is shown.

10. Notifications and Communication

10.1 Admin Notifications

- New RSVP or RSVP change
- Guest slot claimed or released
- Check-in request
- Player or guest arrived
- Event starting soon
- Tournament ready to generate
- Rebuy period ending
- Rebuy/add-on settlement required
- Final-table redraw required
- Incomplete final results
- Realtime or recovery warning

10.2 Registered Member Notifications

- New event published
- Event details changed
- RSVP reminder
- RSVP closes in one hour
- Check-in opened
- Check-in confirmed
- Seat assigned
- Tournament starting
- Rebuys closed
- Prize Pool confirmed
- Final table reached
- Tournament finished

10.3 New Guest Updates

An unregistered guest does not receive permanent group notifications. Event updates are shown through the event page and may also use a browser notification only after explicit permission.

- Guest slot confirmed
- Check-in opened
- Check-in confirmed
- Seat assigned
- Tournament starting
- Rebuys closed
- Final table reached
- Tournament finished

10.4 Event Change Behaviour

When the admin changes date, time, location, buy-in, bounty or another visible event rule after publication, the system must:

- Store the change in the audit timeline.
- Notify all affected registered members.
- Show the updated value prominently on the event page.
- Mark important changes in the pinned chat card.
- Require the admin to confirm whether existing RSVPs remain valid for a major date/time change.

11. Privacy, Visibility and Data Projection

Information	Admin	Registered Member	New Guest	TV
Event date/time/location	Yes	Yes	Yes, event only	Yes where appropriate
Buy-in/rebuy/add-on/bounty rules	Yes	Yes	Yes	No need on TV
Timer/blinds/ante	Yes	Yes	Yes	Yes
Players remaining/average stack	Yes	Yes	Yes	Yes
Estimated Prize Pool / Prize Pool	Yes	Yes	Yes	Yes
Organizer percentage/amount	Yes	No	No	No
Rebuy/add-on totals	Yes	No	No	No
Individual payout amounts	Yes	No	No	No
Paid finishing positions	Yes	Yes after finish	Yes after finish	Optional after finish
Group chat/polls	Yes	Yes	No	No
Admin controls/audit log	Yes	No	No	No

11.1 Location Privacy

Location is optional. The admin may choose whether the complete address is visible immediately to all group members or only to confirmed participants. A public-facing guest landing page should reveal only the location information explicitly approved for that event.

11.2 No Individual Stack Tracking

The system must not ask the admin or players to maintain every player's current chip stack. It tracks total chips created by entries, rebuys and add-ons, then calculates average stack from total chips divided by active players.

12. Validation, Errors, Recovery and Edge Cases

12.1 Account and Group

- Invalid email, weak password, duplicate account and Google sign-in failure
- Expired, revoked or already-used group invitation
- User already belongs to the group
- Admin attempts to delete a group with an active tournament

12.2 Event and RSVP

- Start time in the past
- Missing required event name, date, time, buy-in or duration
- RSVP submitted after the one-hour deadline
- Member reduces guest count below the number of already claimed or checked-in guests
- Event cancelled or rescheduled after RSVP
- Duplicate submission caused by repeated taps

12.3 Guest Access

- Invalid, expired or revoked event code
- QR points to a non-existent or inaccessible event
- Inviter has no free guest slots
- Slot claimed by another guest during confirmation
- Guest tries to access chat, polls or another event
- Guest clears local browser storage and must safely re-identify the reservation

12.4 Chip and Structure Generation

- Duplicate chip values are rejected.
- Insufficient inventory produces a shortage warning and alternative recommendations.
- Blind values that cannot be posted practically are rejected.
- Generated levels must never use a duration other than 10, 15 or 20 minutes.
- The admin must be able to regenerate or edit inputs without losing event attendance.

12.5 Live Tournament

- Accidental double elimination or duplicate rebuy is blocked or easily undone.
- Admin closes or refreshes the page; the active tournament recovers locally.
- Temporary internet loss; admin continues locally while other views show connection status.
- After reconnection, queued admin actions synchronise without duplication.
- Timer drift is corrected from the authoritative timestamp, not by trusting every device's local countdown.
- A player arrives after late registration closes; the system prevents addition.
- The tournament reaches nine players but began with one table; no unnecessary redraw occurs.

12.6 Safe Destructive Actions

- Finish Tournament requires confirmation and review of final positions.
- Cancel Tournament requires confirmation and a reason.
- Restart Level requires confirmation and displays its exact effect.
- Undo shows the action that will be reversed.

13. UX Principles and Design Guidance

13.1 Product Principles

- One dominant next action per user and state.
- The system does the calculation; the admin approves important decisions.
- Registered users get social features; new guests get a simple event-only path.
- The live admin experience prioritises speed, clarity and error prevention.
- The player and guest experiences are simpler than the admin experience.
- TV Mode is presentation-only.
- No virtual poker table, cards, pot graphics or individual stack tracking.

13.2 Visual Hierarchy

- Timer, blinds and primary action have the strongest hierarchy during live play.
- Gold is used selectively for primary actions and selected states, not for every border.
- Purple may identify live/realtime states; green confirms success; red is reserved for destructive actions.
- Use one consistent professional icon family; do not use emoji as interface icons.
- Event cards may use restrained emojis in content because they improve readability and warmth.
- Mobile layouts are designed independently, not as compressed desktop pages.

13.3 Mobile Live Admin

- Timer remains visible at the top.
- Pause/resume and Next Level remain thumb-accessible.
- Player actions open in bottom sheets.
- Secondary actions remain behind Manage Tournament.
- Dangerous actions remain visually separated.

14. End-to-End Acceptance Scenarios

14.1 Admin Happy Path

- Admin creates Friday Night Poker group and invites members.
- Admin creates an event for Friday at 20:00, buy-in 15, rebuy close Level 6, add-on enabled, KO bounty 5, target 3.5 hours.
- Event appears in Events, is pinned in Chat and notifies members.
- Members submit RSVP responses and create guest slots.
- Admin configures an unnumbered chip set and confirms suggested values.
- On event day, admin opens check-in and confirms arrivals.
- Admin generates the final structure from actual attendance and chip availability.

- Admin starts the tournament and all views synchronise.
- Admin records eliminations and rebuys.
- At the end of Level 6, the system enters the settlement break and blocks new players.
- Admin records add-ons, confirms chip exchanges and confirms the final Prize Pool.
- Admin continues the tournament, confirms a final-table redraw at nine players and records final positions.
- Players and guests see paid positions without money; History updates.

14.2 Registered Member Happy Path

- User joins the group and accesses Chat, Events and Polls.
- User sees the pinned event card and chooses Going +2.
- Two guest slots are created and the user shares the link.
- User receives a check-in notification, checks in and receives a seat.
- User follows the timer, blinds, players remaining, average stack and Prize Pool.
- User uses chat and polls during the tournament.
- After elimination, user continues following the event.
- After finish, user sees all paid positions without amounts.

14.3 New Guest Happy Path

- Guest opens the event QR/link without creating an account.
- Guest selects the inviter and an available guest slot.
- Guest enters a name and reserves the slot.
- When check-in opens, guest requests check-in.
- Admin confirms and the guest receives a table and seat.
- Guest follows the limited live view and announcements.
- After finish, guest sees paid positions without money.
- Guest may create an account and request group membership.

14.4 Critical Failure Tests

- Two guests attempt to claim the same slot at the same time; only one succeeds.
- A guest tries to open group chat through a copied URL; access is denied.
- The admin refreshes during Level 4; timer and tournament state recover correctly.
- Internet drops during play; the admin continues locally and synchronises once reconnected.
- A generated structure attempts an 11-minute level; validation prevents it.
- A member attempts to self-record a rebuy; the backend denies the action.
- A public or guest response requests organizer amount or payout amounts; the backend omits them.
- A new player is added after the rebuy deadline; the system blocks the action.

Appendix A. Sample Event

A.1 Published Event

 Friday, 14 August
 20:00
 Campo Grande
 Buy-in: 15
 Rebuys: only after elimination, until end of Level 6
 Add-on: available, maximum one per active player
 KO Bounty: 5
☐ Target duration: 3h 30m

 RSVP: Going • Going +1/+2/+3/+4 • Maybe • Can't Come

A.2 Example Attendance

Person	Response
Alex	Going +2
Sarah	Going
Marco	Maybe
Daniel	Can't Come
Confirmed total	2 registered players + 2 guest slots = 4 participants

A.3 Example Final Structure

Item	Generated result
Players	10
Target duration	3h 30m
Starting stack	10,000
Opening blinds	50 / 100
Starting depth	100 BB
Level duration	15 minutes
Rebuys close	End of Level 6
Ante	Big blind ante from Level 7
Expected finish	23:25–23:50

Appendix B. Glossary

Term	Meaning
Admin	Person who creates and runs the group/event/tournament.
Registered Group Member	Signed-in user with permanent access to group chat, events and polls.

Term	Meaning
New Guest	Unregistered event-only participant invited through a +N slot.
Group	Permanent private community.
Event	One scheduled poker night inside a group.
RSVP	Attendance response.
Guest slot	A temporary place created by Going +1 through Going +4.
Check-in	Arrival confirmation required before seat assignment.
Tournament structure	Starting stack, blinds, level durations, antes and related chip plan.
Rebuy	A new stack after elimination during the rebuy period.
Re-entry	Separate optional entry after elimination; secondary to the normal rebuy flow.
Add-on	One optional additional stack available to each active player at the end of the rebuy period.
KO bounty	Separate amount paid to the player who eliminates another player.
Prize Pool	The amount displayed to players after the private organizer amount is removed.
TV Mode	Read-only large-screen presentation.
Audio Master	Single device selected to play voice announcements.
Final-table redraw	Random seating of nine remaining players when the tournament began with multiple tables.

FINAL PRODUCT TEST

At every moment, each person should see only the information and action relevant to their role and current state. The admin controls the tournament, registered members participate in the group and event, and new guests follow a minimal event-only path. Complex tournament mathematics stays behind the scenes.
