

Poker Night: End-to-End User Flow Testing Guide

This document outlines the step-by-step user flows to test the core mechanics of the Poker Night application. Testing these flows ensures the core logic, UI gates, and state management work flawlessly.

Flow 1: Organizer Setup & Group Management

Goal: Verify an organizer can create an event and invite players.

1. Login: Open the app and log in as a Free tier user.
2. Create Group: Navigate to Groups and create a new group (e.g., 'Friday Night Cards').
3. Create Event: Inside the group, tap Create Game/Event.
4. Link Generation: Once created, locate the Event Link and TV Code generated for this tournament.

Flow 2: Player RSVP & Check-In

Goal: Verify players can join and the 9-player free limit is enforced.

1. Player RSVP: Using a separate device or incognito browser, open the Event Link as a guest/player and RSVP as 'Going'.
2. Check-In: As the Organizer, navigate to the Event's player list.
3. Confirm Check-In: Mark the player as 'Checked In'.
4. Test the Gate: Attempt to check in a 10th player. Verify the system blocks this and displays a 'See Premium' prompt.

Flow 3: AI Tournament Generation

Goal: Verify the AI structure engine builds a coherent tournament.

1. Tournament Setup: Go to Event Settings. Set Duration to 3 Hours. Enable Rebuys. Set Organizer Cost to 10%.
2. Generate Structure: Tap Generate AI Structure.
3. Verify Math: Check that the starting stack is 80 BB or higher (the mandatory floor).
4. Verify Rebuys: Check that the Rebuy Cutoff is optimized (usually around Level 6).
5. Verify Breaks: Ensure a break is scheduled automatically right after the Rebuy Cutoff.

Flow 4: Seating & Live Operation

Goal: Verify the timer and live tournament mechanics work flawlessly.

1. Seating: Assign seats to all checked-in players (Table 1).
2. Start Tournament: Hit Start Timer.

3. Timer Check: Verify the timer begins counting down and the current blinds are displayed.
4. Live Actions: Process a dummy Rebuy for one player. Process an Elimination for another player.
5. Break State: Fast-forward or wait until the scheduled break level. Verify the app automatically transitions to the 'onBreak' state with its own countdown timer.
6. Voice Announcements: At the 1-minute mark of a level, listen for the 5-4-3-2-1 spoken countdown.

Flow 5: TV Synchronization

Goal: Verify external displays sync perfectly with the host.

1. Open TV View: On a laptop or tablet, navigate to <https://poker-night-tools.web.app/tv>
2. Enter Code: Input the TV Code from Flow 1.
3. Verify Sync: Check that the timer, current blinds, and remaining players exactly match the Organizer's screen.
4. Network Test: Disconnect the Organizer's device from Wi-Fi for 30 seconds. Verify the host timer continues ticking locally, and successfully reconnects without losing state.

Flow 6: Payouts & History

Goal: Verify financial tracking and post-game record keeping.

1. End Game: Fast-forward to the end of the tournament or manually end it.
2. Payout Calculation: Open the Payouts screen.
3. Verify Math: Ensure the Gross Pool equals (Buy-ins + Rebuys) minus the 10% Organizer Cost. (Note: KO Bounties should be excluded from this pool).
4. Complete Event: Finalize the tournament.
5. History: Go back to the Group page and verify the tournament is saved in the Group History with the correct final placements.
